

Project Design Phase-II
Data Flow Diagram & User Stories

Date	18 October 2022
Team ID	PNT2022TMID54001
Project Name	Project – Smart Farmer - IoT Enabled Smart Farming Application
Maximum Marks	4 Marks

Data Flow Diagrams:

- Temperature, Humidity, Moisture Sensors are placed in the field and connected to the Arduino Uno.
- The Arduino Uno is connected to the IBM Cloud Platform through the Node Red Web GUI.
- The field conditions can be checked regularly from the Mobile app which is connected through the same Node Red.
- The soil moisture sensor monitors various climatic conditions. The moisture output readings at different weather conditions is taken and updated.
- The flame detector works by detecting the UV radiation at the point of ignition. The sensor would become aware of it and produce a series of the pulses that are converted by detector electronics into an alarm output.
- NPK sensor is based on reflectance spectroscopy, which detects the level of energy absorbed or reflected by soil particles.
- All these information is collected regularly.
- Any changes or accidents are notified through the mobile app.
- Immediate action is also taken through the IBM cloud Platform.

User Stories:

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, mobile number, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive OTP.	I can authenticate my account by submitting the OTP.	High	Sprint-1
		USN-3	As a user, I can register for the application through Gmail.	I can enter my account by clicking the confirm option received in mail.	Medium	Sprint-1
